

Ideal Jobs

With the group members of this team there is no common element as such with the ideal jobs. Each person has a different field in IT that their ideal job requires, Programming, Data Analysts, Cyber Security and Networking. The difference in these areas cover a main part of the IT industry, from the hard wiring to programming to analyzing software and security. With this team's career plans being so different, it seems to me, that it would be possible for this team to form an IT company that could offer an IT service from start to finish.
