

‘That Team’ members personal information.

Colin Batiste. Student number s3807918.

I came to Australia over 20 years ago from England with the intension of having a better life, but most importantly giving my children a better life. Up until we emigrated, I lived just outside London being the stereotypical ‘Eastender / cockney’. Completed senior school with enough to get me a job and thought life. After completing school, I started an electrical apprenticeship’ and became an electrician after 4 long years, since then I have been an electrician all of my working life. Since the IT industry has merged more and more into the electrical trade, I became more interested in it and since being in Australia I have completed a Diploma in IT which I have great pride in, and it has also helped in the aspects of my trade.

Michael Souprounovich. Student number s3817052.

I was born and grew up in Melbourne. Some of my great-grandparents came from Russia, and some from Britain. I have completed primary school at Eastwood Primary School and have been studying at home for my secondary school education. I have completed two online courses prior to this one – The Elements of Computing Systems (Nand2Tetris) part one and two. Certificate of completion is available [here](#) and [here](#). I currently communicate using Auslan, and written English. Since I am deaf, I cannot hear or speak English. Some of my hobbies include playing basketball, playing with my go-kart, and programming games in Lua on my Ti-Nspire CX CAS calculator. My interest in IT officially began when I was about eight years

old, and my neighbour left her old computer on her nature strip, so I brought it home and connected it and got it to work successfully.

Rahnny Tajaran. Student number s3818720.

I am currently studying Bachelor of Information Technology and Working full time in the Hospitality industry. I was born in the Philippines and migrated here when I was 17. I speak Filipino and English. My favourite sport is basketball. I have a daughter; her name is Zoe and she means the world to me. My interest in IT is programming and cybersecurity. It started when I was in high school. I was always good with computers and when my family have troubles with them, I was the one they always go to. My interest sparked in cybersecurity when I first watched Mr. Robot. I liked the idea of defending cyberattacks and strategizing against hackers. What makes a good I.T person and what path to take in the industry? I really would love to learn more of the technical side of I.T because it interests me the most.

Brendan Dilworth. Student number s3750271.

My interests in I.T. started at a young age, I loved playing games and through school started learning about databases and doing some light coding. I always enjoyed taking old computers apart although I had no idea what I was doing and learning about all of the different hardware components. I have experiences doing light coding, developing robots, using a 3D printer and mechanical components, and developing websites from previous studies or personal interest. Through my studies,

I am hoping to develop a better understanding of what tools there are out there that I can implement them into my financial planning career, to make my own job easier and better help my future clients. In the future, I would love to develop a program which uses statistical techniques to analyse investment options based on an outlines risk profile and historic data from the ASX.
